

External Roller Blind Operation and Maintenance Guide

How to operate your External Roller Blinds....

It is important to operate your External Roller Blinds correctly to ensure you do not cause any unnecessary damage or break your warranty terms and conditions.

Operation is simple and if you follow these simple rules your blinds should last well beyond their warranty period.

Crank Operated External Roller Blinds

1. Always operate your External Roller Blinds with the crank held in two hands
2. Make sure to hold the crank perpendicular or at a right angle to the blind.
3. Make sure that nothing has fallen near the blind and caused the bottom rail to become jammed or obstructed.
4. Never force or put unnecessary pressure on your crank.
5. Keep an eye on what you are doing.
6. Your blinds are designed to stop at the top and bottom and have pre set position. If you force the blind past these points you can do major damage to the crank and or fabric.
7. Make sure to put your blinds up in strong wind and extreme weather

Motor Operated External Roller Blinds

1. Motorised External Roller Blinds are easy to operate it's a simple press of the button and away they go.
2. If a power outage occurs make sure to watch as you operate your blinds as in some cases this can cause the motors memory to be erased and Roller Blinds will move passed their pre programmed stopping positions causing damage to the fabric and possibly your window frames.
3. Make sure that nothing has fallen near the blind and caused the bottom rail to become jammed or obstructed before operating your Roller Blinds.
4. Make sure to put your blinds up in strong wind and extreme weather

How to care and maintain your External Roller Blinds....

It is easy to take some simple steps to maintain your External Roller Blind fabric. When cleaning any spills or dirty finger prints make sure never to use any chemical cleaning products and only use a damp clean white cloth.

It is best to try and clean a large area around the mark you are trying to remove as spot cleaning can cause small faded spots in your fabric.

Always allow your blinds to dry before putting them away to avoid any mould.

Remember should your blind start operating in a way that seem incorrect it is best to contact us immediately as further damage maybe caused.
