

## Panel Glide Operation and Maintenance Guide

How to operate your Panel Glide....

It is important to operate your Panel Glide correctly to ensure you do not cause any unnecessary damage or break your warranty terms and conditions.

Operation is simple and if you follow these simple rules your blinds should last well beyond their warranty period.

### Cord Operated Panel Glide

1. Always operate your Panel Glide with the cord held in two hands
2. Make sure to hold the Cord perpendicular or at a right angle to the blind.
3. Make sure that nothing has fallen near the blind and caused the bottom rail to become jammed or obstructed.
4. Never force or put unnecessary pressure on your cord.
5. Keep an eye on what you are doing.
6. Your blinds are designed to stop at pre set positions. If you force the blind past these points you can do major damage to the blind.

### Wand Operated Roller Blinds

1. Your blinds are designed to stop at pre set positions. If you force the blind past these points you can do major damage to the blind.
2. Make sure to always use the Wand to operate the blind and never pull the Panel Glide by the fabric

How to care and maintain for your Panel Glide....

It is easy to take some simple steps to maintain your Panel Glide fabric. When cleaning any spills or dirty finger prints make sure never to use any chemical cleaning products and only use a damp clean white cloth.

It is best to try and clean a large area around the mark you are trying to remove as spot cleaning can cause small faded spots in your fabric.

**Remember should your blind start operating in a way that seem incorrect it is best to contact us immediately as further damage maybe caused.**
