

Panel Glides

Product Information and Specifications

Nomad Uses the Acmeda System exclusively in the manufacture of Panel Glides and in particular the CU41 Spline System.

Acmeda CU41 Spline System

The CU41 Spline System is a non Velcro spline only system which means no pucker or bunching of fabric at the top on the panel. The system is available in cord and wand driven options. As a result of the spline fabric attachment method the blind is elegant in style with an oval shaped top rail attaching fabric to the track.

The Track comes in 2, 3, 4 and 5 track configurations and a range of standard colours including Anodised, Black, White and White birch. We can also arrange for mill finish to be powder coated in a dulux colour of your choice (minimum orders apply).
